Explanatory Notes:

1. Per NR 135.39, annual fees are applied on an annual basis and are based on the acres of unreclaimed disturbance.
2. Per NR 135.39, annual fees for permitted mines where non-metallic mining is permitted and approved, but where no non-metallic mining has yet taken place, are restricted. In these circumstances, a yearly administrative and environmental monitoring and permit tracking fee of \$525 will be charged to cover County costs for mines in bedrock and glacial deposits. The State portion of the yearly permit monitoring and tracking fee will be \$15.
3. In circumstances where a mine opens midyear, the annual fee for the following year will be increased to reflect the acres of disturbance and the number of months that the mine was active during the year the mine was opened.
4. Fee adjustments between categories may be made to credit areas being used for approved non-metallic mine reclamation test plots or demonstration areas, or to credit areas within the mine where successful reclamation has been completed and certified by the County.
5. In circumstances where a permit is transferred & no plan amendment is required, a \$1,000 transfer fee will be charged.
